MOHITH RAJ A K

Kannur, Kerala | akmohithraj@gmail.com | 8281651937 | linkedin.com/in/mohith-raj-a-k-157b25307 | mohithgit-hub.github.io

CAREER OBJECTIVE

Third-year Computer Science and Engineering student with a strong interest in Cybersecurity and ethical hacking, currently building knowledge in cybersecurity technologies, security tools, and concepts related to cyber intelligence.

EDUCATION

Nehru Institute of Technology — B.E. Computer Science and Engineering (2024 – 2028)
St. Michaels AIHSS Kannur — High School and Higher Secondary Education (2021 – 2024)

TECHNICAL SKILLS

Languages: Python, C, Java
Security Tools: Metasploit, Nmap, Wireshark, Kali Linux
Databases: PostgreSQL, MySQL

ACADEMIC AND PROJECTS

Labourshaala — Local Worker Service Platform

React | Tailwind CSS | Vite | JavaScript | GitHub | Built with AI

- Developed a web platform prototype connecting customers with local workers such as plumbers, gardeners, and other service providers.
- Implemented worker listing, search, worker detail, booking, and dashboard workflows using React and React Router.
- Built reusable booking state management and responsive UI components with Tailwind CSS.
- Used AI-assisted development to accelerate UI implementation, debugging, and feature refinement.

Browsecure — Browser Security Extension

JavaScript | Browser Extension APIs | HTML | CSS | GitHub | Built with AI

- Developed a browser security extension concept focused on improving user awareness and protection while browsing.
- Designed browser-side security features and a user-friendly interface for identifying potentially risky web activity.
- Used AI-assisted development for implementation, debugging, and refinement of the extension.

Hospital Management System Deployment using CI/CD

Python (Flask) | Jenkins | Docker | AWS EC2 | Git | GitHub

- Developed a Flask-based hospital management web application with modules for patient records, doctor profiles, appointment scheduling, and emergency contacts.
- Configured a Jenkins CI/CD pipeline to automate application builds and deployments based on changes pushed to the GitHub repository.
- Containerized the application using Docker, enabling consistent and portable deployment across environments.
- Deployed the containerized application on an AWS EC2 instance, configuring security groups and network access for application connectivity.
- Integrated GitHub, Jenkins, Docker, and AWS EC2 into an end-to-end CI/CD workflow, streamlining the application deployment process.

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL — Introduction to Soft Computing
- NPTEL — Artificial Intelligence: Concepts and Techniques
- NPTEL — Artificial Intelligence: Knowledge Representation and Reasoning
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Machine Learning for All — Coursera
- Big Data Emerging Technologies — Coursera
- Microsoft — Introduction to Generative AI
- Intra College Technical Symposium — Techquest 2025
- Boomibot — Affordable Automation for Farmers (AICTE NIT)
- Dynamic Cyber Risk Modeling — Paper Presentation, Dhanalakshmi College
